Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/596,076	Applicant(s) MARQUES, MARCO EDUARDO	
	Examiner MOHAMMAD M. ALI	Art Unit 3744	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Behr (RE 37,630 E). Behr discloses an improvement in a refrigeration system for cabinets provided with a top cover (115 Fig. 4) and with internal peripheral walls (114a), made in metallic sheet and around which is seated an evaporating means (122/222a-c/322a, 322b) connected to the outlet of an expanding device (123) which is connected to the outlet of a condenser (331 Fig. 13) and to the suction of a compressor (330) of the refrigeration system(326), characterized in that the evaporating means (22/122/222a-c/322a, 322b) comprises at least two tube extensions , each of them being seated around a respective height portion of the internal peripheral walls of a well type merchandiser (IM, Fig. 13) and having a refrigerant fluid inlet end maintained in fluid communication with a respective expanding device (323), and a refrigerant fluid outlet end maintained in fluid communication with the compressor (330). See Fig.5,6,12,13, column 5, lines 13-56; column 6, line 65-column 7, line 67; column 11, lines 17-65. Regarding claim 2, it is inherent that if a continuous tube is used in an evaporator its tube diameter is larger than the tube diameter of the evaporator coils is separated in a discontinued manner because each coils have separate expansion devices for better efficiency.
